

Program 2: Flask application inside Docker.

1. Files in the project

Program_1/

- app.py
- Dockerfile
- requirements.txt

2. Contents of each file

app.py

```
GNU nano 7.2 app.py
from flask import Flask

app = Flask(__name__)

@app.route("/")
def hello():
    return "Hello, Docker!"

if __name__ == "__main__":
    app.run(host="0.0.0.0", port=5000)
```

requirements.txt

```
GNU nano 7.2 requirements.txt
flask
```

Dockerfile

```
GNU nano 7.2 Dockerfile
# Use a lightweight Python base image
FROM python:3.9-slim

# Set working directory inside container
WORKDIR /app

# Copy and install dependencies
COPY requirements.txt .
RUN pip install --no-cache-dir -r requirements.txt

# Copy the application code
COPY . .

# Set Flask environment variables
ENV FLASK_APP=app.py
ENV FLASK_RUN_HOST=0.0.0
ENV FLASK_RUN_PORT=5000

# Expose the Flask port
EXPOSE 5000

# Command to run Flask
CMD ["Flask", "run"]
```

3. Build the Docker image

`docker build -t flask-docker-app .`

Once done, check your image:

`docker images`

4. Run the container

`docker run -d -p 5000:5000 --name flask_container flask-docker-app`

Check if it's running:

`docker ps`

```

1rv24mc120_yashwanth_c@yashwanth-c-Inspiron-15-3525:~/devOps/program1$ nano app.py
