

Program6: Deploy an Automated Build Pipeline using Docker Hub

Step1: Create a Github personal access token (PAT)

Create a new repository on github

Navigate to the settings -> Developer settings -> PAT -> generate a classic token

Step2: create a Dockerfile and Build the image

Docker build -t program6

Step3: Tag the image for dockerhub

Docker tag program-6 <dockerhub-username> / program-6:latest

Step4: Push the image to DockerHub

Docker login -u <dockerhub-username>
