

Program 6

Project Structure:

```
program-6/  
├── Dockerfile  
├── package.json  
├── package-lock.json  
└── node_modules/
```

Steps involved:

1. Create personal access token
setting->generate pat with scope read:packages and write: packages

2. Build docker images

```
srikanths@Srikanths-MacBook-Air ~> docker build -t program6 .
```

3. Tag the image and login to docker hub

```
srikanths@Srikanths-MacBook-Air ~> docker tag program6
```

4. Push images to docker hub

```
srikanths@Srikanths-MacBook-Air ~> docker push srikanth0527/program6:latest
```

5. Push to ghcr

```
srikanths@Srikanths-MacBook-Air ~> docker push ghcr.io/srikanth-s2003/program6:latest
```

6. Push the source code to github

Git add .

Git commit -m "init commit"

Git push -u origin main

7. verification:

Verify image in docker hub: srikanth-s2003/program6

8. output:
