

DOCKER INSTALLATION

Step 1- Change current username to your usn and name format.

```
root@srikanth-VMware20-1:~# whoami
root
root@srikanth-VMware20-1:~#
```

Step 2- To confirm changes use command whoami

```
root@srikanth-VMware20-1:~# sudo usermod -l newusername oldusername
```

Step 3 - Install docker

Visit the original docker docs website and check installation steps from there.

Type the given commands for installation of docker

```
root@srikanth-VMware20-1:~# sudo apt-get install update
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
E: Unable to locate package update
root@srikanth-VMware20-1:~# sudo apt-get install docker
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
Package docker is not available, but is referred to by another package.
This may mean that the package is missing, has been obsoleted, or
is only available from another source
However the following packages replace it:
  wmdocker

E: Package 'docker' has no installation candidate
root@srikanth-VMware20-1:~# sudo apt-get install vin
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
Solving dependencies... Done
The following additional packages will be installed:
  libsodium23 vin-common vin-runtime vin-tiny xxd
Suggested packages:
```

Step 4- to verify docker installation:sudo systemctl status docker

```
root@srikanth-VMware20-1: ~  
root@srikanth-VMware20-1:~# sudo systemctl status docker  
● docker.service - Docker Application Container Engine  
   Loaded: loaded (/usr/lib/systemd/system/docker.service; enabled; preset: enabled)
