

Program4: Integrate Git with docker for Source controlled Application Build

Step1: Create a folder program4 and move into the folder.

```
Mkdir program4
```

```
Cd program4
```

Step2: create file package.json by the command

```
Npm init-y
```

Step3: create the file [index.js](#)

```
Const express = require ("express");  
Const app = express();  
Const port = 3000;  
app.get("/", (req, res) -> {  
  res.send("Hello from git + docker integration");  
});
```

```
app.listen(port, () => {  
  console.log('Server is running at port ${port}');  
});
```

Step4: add the dependency

```
Npm install express
```

Step5: create a dockerfile and add similar contents

Step6: create a new Github repo

Click new -> new repository,

Add repo name

Step7: Getting a Personal Access token (PAT)

Go to profile -> Developer settings -> personal access token -> token(classic)

Generate token

Step8: Initialize github repo locally.

```
Git init
```

```
Git add .
```

```
Git commit -m "initial commit"
```

```
Git branch -M main
```

Step9: push code to github.

```
Git push -u origin main
```
